State Natural Areas Program Roundtable

Advances in herbicide application for invasive species control and lessons learned from practitioners

natural
areas
ASSOCIATION

SNAP Roundtables are a platform for practitioners and academics to share information, techniques, methodologies, scientific approaches, and even moral support. Our sincere thanks to the [Central Indiana Land Trust](#) and [Ozark Koala Ecosystem Services](#) for sponsoring this program. Please share our gratitude by taking a moment to visit their websites.

The [May 11 SNAP Roundtable](#) was timely and informative. Participants heard from Dr. Stephen Enloe, Agronomy Dept/CTR for Aquatic & Invasive Plants, University of Florida, as he discussed *Recent advances in herbicide formulations and application techniques for woody invasive plant management*, and Jerod Huebner, Director of Prairie Management, Missouri Prairie Foundation, and his findings related to *Invasive Species Management - Maximize Herbicide Efficacy and Minimize Collateral Damage in Grasslands*. During Open Discussion, the participants considered the ongoing challenges of garlic mustard as an invasive plant within their natural areas. NAA plans to tackle the topic of garlic mustard in more detail based upon this dialogue.

Watch your email and our website for future programming information. If you would like to suggest a topic for a future SNAP meeting, please email mmcgintyklos@naturalareas.org.
